

## Why LogPoint?

I have worked in several academic and personal projects related to database management systems and e-commerce. From these projects, I realized the importance of proper data security, management and analysis and have been interested regarding the prospect of working in these fields ever since. LogPoint is one of the leading companies providing cybersecurity automation and analytics services to its clients. Working as an intern at LogPoint would provide me the opportunity to work with the experienced and professional team here. While I don't have any security-based projects to showcase yet, I have worked on few management systems and also have basic knowledge of machine learning principles and have good knowledge of Python, JavaScript, node.js, SQL and NoSQL databases.

Working as an Intern at LogPoint would mean that I would get to learn from and collaborate with the team of professionals enthusiastic about solving particular security issues of businesses using cutting-edge technologies. I respect the company's mission of helping customers' grow and manage their business through ensuring cybersecurity and would be thrilled to work with such a reputed organization.
